Our first project for FK Gardner and Sons, the VGL Warehouse, was located at the Port of Brisbane.

The project involved the construction of a new shipping container storage and warehouse facility for VGL located on the banks of the Brisbane River within the Port of Brisbane.

The site was 19000m² in size and involved a range of civil and building components which Civcorp undertook including the construction of the new building pad, a cement stabilised hardstand which housed a prestressed concrete deck, internal stormwater drainage, water main modifications, a new fully landscaped bio-retention basin and new access connections to the Port of Brisbane road network.

In addition Civcorp also provided all of the geotechnical testing and certification works for the new building foundations and temporary works.
